

Quod Rings Manual

1) Installation

Installing from a connected PC :

QuodRings can be installed on a Nokia Series 60 compatible mobile phone using a PC and an infrared or Bluetooth connection.

- 1) Install Nokia PC Suite on your computer.
- 2) Connect your mobile phone to your computer.
- 3) Double click QuodRings .Sis installation file and follow the instructions.

Installing directly on you Mobile Phone :

You can download QuodRings installation file using an internet connection or any other means and then install it directly on your series 60 mobile phone.

- 1) Open the QuodRings .Sis installation file using the Phone Installer.
- 2) Follow the instructions.

Installation Notes:

- A brief dialog will appear stating that the identity of this software supplier cannot be guaranteed, this is a temporary message – will disappear when Quod receives the Symbian Signed certification, meanwhile just click Next.
- Please make sure that QuodRings is not running on your mobile phone in the case of a re-installation.

Requirements

200 k free on your phone memory.

A Nokia Series 60 compatible Mobile Phone

2) Using the application

QuodRings is a practical music player application for your smart phone, you can use it to conveniently carry and listen to your music files everywhere you go! But QuodRings is more than a common music player as it allows your to use your music files as ring tones.

1) Sending the music files to the phone

After the installation you must send your music files to the phone, you can do this by connecting to the phone using Nokia PC suite, by an bluetooth obex file transfer or you can download then over the internet. Don't worry about the location of the files in the phone.

Note: If your music files are not in the ogg vorbis file you need to convert them first, there are several encoders and converters available, check <http://www.vorbis.com> for more instructions.

2) Locating the music files

With the music files on the phone enter the QuodRings application and select Options / **Search**. In a moment your music files will be listed in QuodRings music list box.

Conveniently QuodRings will keep track off the location of the music files but will not copy them anywhere.

In the future you must re-use the search application when you add send new music files to your phone.

3) Using the files

Just select the desired music on the application list using the cursor and use the application options on it. **Play** will allow you to preview the music, **Ring** / Set Default will set the music as the default ring for everybody, Ring / Set for will allow the music to be set as ring tone for some people of you contact list. Ring / Disable disables this music as ring tone.

4) Other music related options

Volume – You can use the left / right cursor arrows to decrease / increase the volume. The selected volume will be used when the phone rings also.

File Options – File / Details allows you to know more about the selected music file. Delete allows you to delete the selected music (after confirmation), this is useful if you need to quickly free some phone memory.

5) Other options

Memory Info – Details about the free memory in the phone.

About – Information about the application.

Exit & Disable – Exits and disables the application, the profile default ringtone will be used when you exit the application using this option instead of the default “Back”.

Notes :

To allow the definition of specific ring tones with non-default music formats QuodRings bypasses the default profile definitions. When activated it will use its own definitions when applicable, the only exception is when one of the silence profiles is selected, QuodRings will respect the profile definition in this case. The Exit & Disable option described above de-activates QuodRings.
